

K8s: Advanced Resources

- **Resource Limits**
- Ingress
- DaemonSet
- StatefulSet
- Jobs
- CronJobs
- Lab

```
apiVersion: v1
kind: Pod
metadata:
  name: myapp
spec:
  containers:
  - name: myapp
    image: appv1
    resources:
      limits:
        memory: "128M"
        cpu: "500m" # 50ms cpu time/100ms
  ...
```

Resource Requests (Minimums)

```
apiVersion: v1
kind: Pod
metadata:
  name: myapp
spec:
  containers:
  - name: myapp
    image: appv1
    resources:
      requests:
        memory: "64M"
        cpu: "100m"
  ...
```

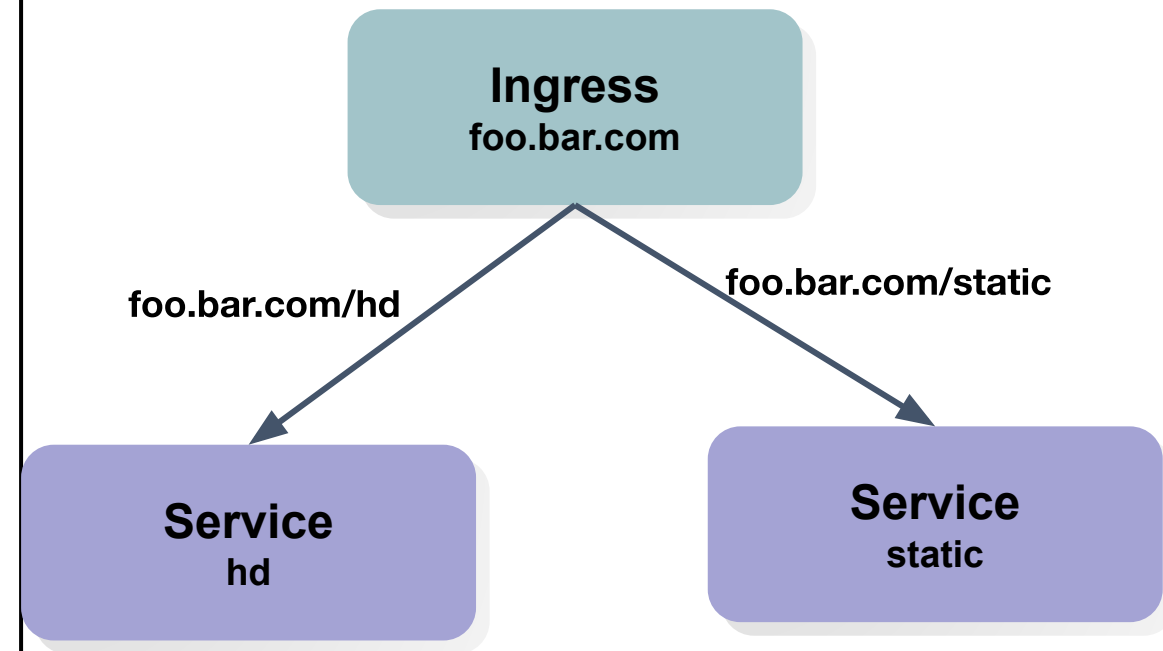

- Resource Limits
- **Ingress**
- DaemonSet
- StatefulSet
- Jobs
- CronJobs
- Lab

```
...
spec:
  rules:
  - host: foo.bar.com
    http:
      paths:
      - path: /hd
        backend:
          serviceName: hd
          servicePort: 4200
      - path: /static
        backend:
          serviceName: static
          servicePort: 8080
```

- Resource Limits
- Ingress
- **DaemonSet**
- StatefulSet
- Jobs
- CronJobs
- Lab

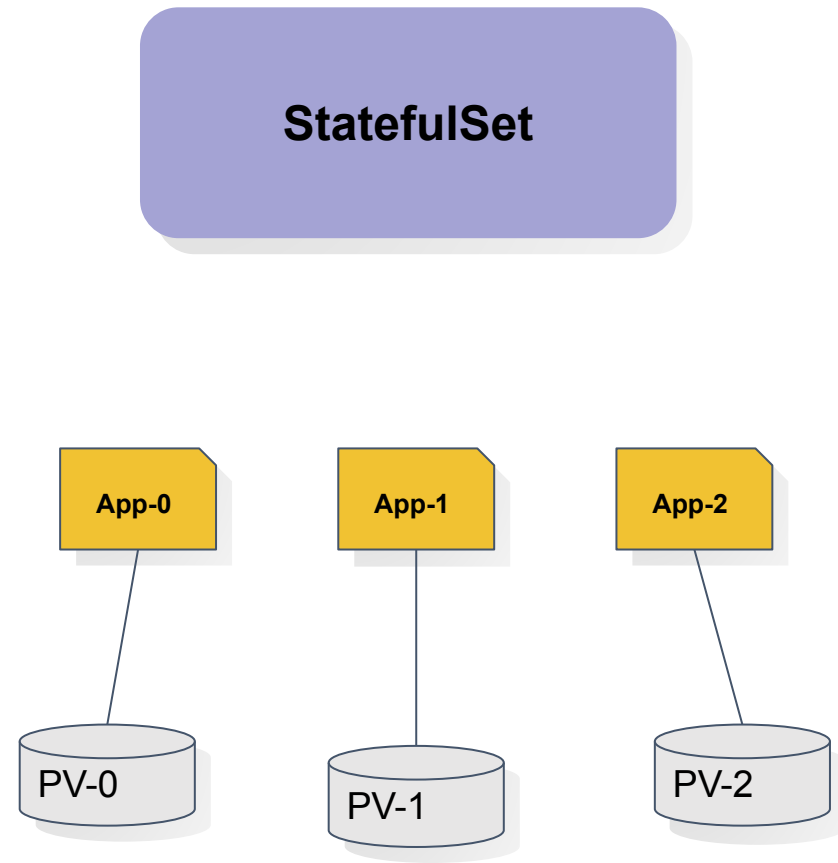

- Resource Limits
- Ingress
- DaemonSet
- **StatefulSet**
- Jobs
- CronJobs
- Lab

StatefulSets are like Deployments except they provide:

- Stable network id
- Stable storage
- Ordered, sequential deployment

- Resource Limits
- Ingress
- DaemonSet
- StatefulSet
- **Jobs**
- CronJobs
- Lab

```
apiVersion: batch/v1
kind: Job
metadata:
  name: db-backup
spec:
  template:
    spec:
      containers:
      - name: db-backup
        image: db-backup
        command: ["make-backup"]
        restartPolicy: Never
      backoffLimit: 4
```

Job

Pod

Pod

- Resource Limits
- Ingress
- DaemonSet
- StatefulSet
- Jobs
- **CronJobs**
- Lab

```
apiVersion: batch/v1beta1
kind: CronJob
metadata:
  name: hourly-job
spec:
  schedule: "0 * * * *"
  jobTemplate:
  ...
```

CronJob

Job

Job

- Resource Limits
- Ingress
- DaemonSet
- StatefulSet
- Jobs
- CronJobs
- **Lab**

Which type of controller should be used for the following scenario?

A horizontally scalable webapp that stores its state information in an external database.

1. Job
2. DaemonSet
3. Deployment
4. StatefulSet

Which type of controller should be used for the following scenario?

A nightly batch process that calculates the total number of daily active users of an app.

1. Job
2. DaemonSet
3. Deployment
4. StatefulSet

Babysitting a Stateful App
